PART 1

1. **How many datasets were provided?**

9

2. **What does each dataset represent?**

Customers

Products

Orders

Stores

Returns

Employees

Suppliers

Inventory

Order items

3. **Identify the Primary Key of each table.**

Customers ID

Products ID

Orders ID

Stores ID

Returns ID

Employees ID

Suppliers ID

Inventory ID

Order items ID

4. Identify possible Foreign Keys?

Customers ID

Products ID

Stores ID

Orders ID

5. Draw the relationship between the tables.

CUSTOMERS
PRIMAMRY KEY: Customer_ID
1 customer leads to many orders

ORDERS
PRIMAMRY KEY: Order_ID
FOREIGN KEY: Customer_ID
1 order leads to many order items

ORDER_ITEMS
PRIMARY KEY: Order_Item_ID
FOREIGN KEYS: Order_ID, Product_ID

PRODUCTS
Primary keys: Product_ID

PART 8

1.Which product generated the highest revenue?

BEAUTY ITEM 156

2. Which store performed best?

SHOPSMART LAGOS

3. Which category sells the most?

BEAUTY

4. Which month generated the highest revenue?

DECEMBER

5. Which customers spend the most?

AMY ROBINSON

6. Which products are frequently returned?

7. Which supplier supplies the highest number of products?

8. Which stores have low inventory?

SHOPSMART ABUJA

SHOPSMART ENUGU

SHOPSMART KADUNA

9. Which region performs best?

EAST

10. Which product category should management invest in?

BEAUTY ITEM 1

PART 9

SHOPSMART BUSINESS REPORT

This report is for the period of January to December 2025 consisting of 5000 customers, 500 products and 25 stores with 50,000 orders that have generated ₦7.7billion in sales. Unfortunately, the report also demonstrated that products that do not consider seasonal demand, outstanding orders, and low order completions are plagues to the business that present operational concerns.

KEY FINDINGS

1. This business has generated substantial sales amounting to ₦7.7billion across all 25 stores without adjusting for the order status.
2. Approximately ₦670miilion in sales was generated in December (8.7% of total sales), while February recorded ₦577miliion (7.5% of total sales) sales in the year 2025. This shows that the business has seasonal sales variations caused by products that do not take into consideration different seasons.
3. Completed sales amount to 33% of sales while pending and cancelled represent 67% of sales (33.2% and 33.7% respectively).This shows a number of potential issues including processing delays, shipping and logistic hurdles and complex check out processes.

BUSINESS RECOMMENDATIONS

1. The sales figure must be adjusted for order status to avoid overstating the revenue leading to wrong cash flow projections resulting in flawed business decisions and legal action against tax compliance.
2. In order to stabilize cash flow throughout the year to avoid seasonal sales variation, counter seasonal products must be introduced that cater for seasons such as back to school, health and wellness goods that offset consumers buyer's remorse and indulgence that normally occur in December.
3. In order to fix processing delays that might lead to pending orders and cancellations, a protocol that fast track pending orders could be introduced by automating payment verification and over communicating with the customer during the pending window.

RISK IDENTIFIED

1. There is a high revenue realization risk due to the high percentage of pending orders and cancellations.

OPPORTUNITY IDENTIFIED

Customers with pending orders can be contacted to find out if there are some issues since pending orders normally lead to cancelations.
